Medições/Métricas

**INSTITUTO FEDERAL
RIO GRANDE DO SUL**

Otimizações e Métricas

- Otimizações de estrutura (projeto)
 - Métricas de acoplamento, coesão, complexidade ciclomática, etc
- Otimizações de algoritmo
 - Métricas de complexidade computacional, notações assintóticas, etc
- Otimizações de dados
 - Normalização, desnormalização, consistência, disponibilidade, particionamento, etc

Por exemplo: vamos falar de performance ...

Mas lembre ...

“premature optimization is the root of all evil”

– Donald Knuth

INSTITUTO FEDERAL

Profiling (instrumentação)

The screenshot displays the VisualVM 1.0 interface. On the left, the 'Applications' pane shows a tree structure with 'Local' > 'VisualVM' > 'java2d.Java2Demo (pid 3812)' > '[snapshot] 01:30:42 odp.'. The main window has a tab for 'java2d.Java2Demo (pid 3812)' and a sub-tab for 'Profiler'. The 'Profiler' sub-tab is active, showing a 'Profiler Snapshot' with a 'View: Methods' dropdown. Below this is a 'Call Tree - Method' table. The table has four columns: 'Method', 'Time [%]', 'Time', and 'Invocations'. The data is as follows:

Method	Time [%]	Time	Invocations
All threads		1068 ms (100%)	1
Intro		950 ms (100%)	1
java2d.Intro\$Surface.run ()		950 ms (100%)	1
Self time		822 ms (86,4%)	1
java2d.Intro\$Surface\$Scene.pause		128 ms (13,6%)	1
AWT-EventQueue-0		117 ms (100%)	1
javax.swing.SystemEventQueueUtilities		116 ms (99,6%)	21
java2d.Intro\$Surface.paint (java..		86.1 ms (73,4%)	18
Self time		30.0 ms (25,6%)	21
java2d.Java2Demo\$J2DIcon.paint		0.566 ms (0,5%)	3
sun.awt.windows.WComponentPee		0.097 ms (0,1%)	1
java2d.Java2Demo\$J2DIcon.getIc		0.021 ms (0%)	3
java2d.Java2Demo\$J2DIcon.getIc		0.004 ms (0%)	3
java2d.Java2Demo\$4.windowDeicon		0.260 ms (0,2%)	1
java2d.Java2Demo\$4.windowIconific		0.241 ms (0,2%)	1

At the bottom of the profiler window, there are buttons for 'Call Tree', 'Hot Spots', 'Combined', and 'Info'.

Profiling

The screenshot shows the Chrome Developer Tools interface with the Profiler tab selected. The address bar displays the URL `http://v8.googlecode.com/svn/data/benchmarks/v7/run.html`. The top toolbar includes icons for Elements, Resources, Network, Scripts, Timeline, Profiles, Audits, and Console. The left sidebar shows the 'Profiles' section with 'CPU PROFILES' and 'Profile 4' selected. The main panel displays a table of CPU profiles.

Self	Total	Function
98.41%	100.00%	▼ lin_solve navier-stokes.js:128
96.36%	97.87%	▼ project navier-stokes.js:239

39.79%	40.55%	▶ runNavierStokes navier-stokes.js:35
1.37%	1.44%	▼ diffuse navier-stokes.js:157
1.37%	1.44%	▼ dens_step navier-stokes.js:277
1.37%	1.44%	▼ FluidField.update navier-stokes.js:329
1.37%	1.44%	▼ runNavierStokes navier-stokes.js:35
1.37%	1.44%	▶ Measure base.js:202
0.68%	0.68%	▼ dens_step navier-stokes.js:277
0.68%	0.68%	▼ runNavierStokes navier-stokes.js:35
0.68%	0.68%	▶ Measure base.js:202

The bottom status bar shows 'Heavy (Bottom Up)' and a percentage icon, indicating the current view of the profile.

How Loading Time Affects Your Bottom Line

<http://blog.kissmetrics.com/loading-time/>

EVERY SECOND COUNTS

Loading time is a major contributing factor to page abandonment. The average user has no patience for a page that takes too long to load, and justifiably so.

Observation: slower page response time results in an increase in page abandonment, as demonstrated in the following chart.

INSTITUTO FEDERAL
RIO GRANDE DO SUL

Escalabilidade!

INSTITUTO FEDERAL
RIO GRANDE DO SUL

Vamos a parte prática: exemplos de boas práticas de projeto e implementação com a linguagem Java (e outras que forem aparecendo)

Práticas para obter performance

Regra geral: conheça as especificidades da linguagem

INSTITUTO FEDERAL
RIO GRANDE DO SUL

Números

- Não use os *wrappers*, prefira os primitivos

```
// em vez de:  
Integer n = 10;
```

```
// prefira:  
int n = 10;
```

Strings

- Não use new para instanciar Strings, declare literalmente
- Não concatene Strings em loop, use StringBuilder
- Não converta números para Strings concatenando-os com ""

```
// em vez de:  
String s = new String("teste");
```

```
// prefira:  
String s = "teste"
```

```
// em vez de:  
s = s + "string"
```

```
// prefira:  
s.append("string")
```

```
// em vez de:  
String s = 10 + "";
```

```
// prefira:  
String s =  
String.valueOf(10);
```

Kludges, Hacks, ou *gambiarrras*

```
int i = 5;  
String s = i + "";
```

INSTITUTO FEDERAL
RIO GRANDE DO SUL

demonstrar ...

INSTITUTO FEDERAL
RIO GRANDE DO SUL

Em JavaScript e PHP

- Evite consultar o length de um array dentro do for, atribua antes

// em vez de:

```
for ($i = 0; $i < count($elementos); $i++)
```

// prefira:

```
for ($i = 0, $count = count($elementos);  
    $i < $count; $i++)
```

demonstrar ...

INSTITUTO FEDERAL
RIO GRANDE DO SUL

Práticas para obter confiabilidade e estabilidade

Regra geral: programe defensivamente

INSTITUTO FEDERAL
RIO GRANDE DO SUL

Números

- Não use float ou double quando precisão for necessária, prefira BigDecimal

```
// em vez de:  
double v1 = 1.1;  
double v2 = 0.1;  
double v3 = v1 + v2;
```

```
// prefira:  
BigDecimal v1 = BigDecimal.valueOf(1.1);  
BigDecimal v2 = BigDecimal.valueOf(0.1);  
BigDecimal v3 = v1.add(v2);
```

Strings

- Não use `==` para comparara Strings, use `equals`
- Prefira `literal.equals(variavel)` em vez de `variavel.equals(literal)`

demonstrar ...

INSTITUTO FEDERAL
RIO GRANDE DO SUL

Em C/C++

- Compare o literal com a variável em condicionais de igualdade (útil em PHP, JavaScript, C, C++)

```
// em vez de:  
if (v == 1) ...  
while (v == 1) ...
```

```
// prefira:  
if (1 == v) ...  
While (1 == v) ...
```

Coding Conventions

comp.lang.c FAQ list • Question 17.4

Q: Why do some people write `if(0 == x)` instead of `if(x == 0)`?

A: It's a trick to guard against the common error of writing

```
if(x = 0)
```

If you're in the habit of writing the constant before the `==`, the compiler will complain if you accidentally type

```
if(0 = x)
```

RIO GRANDE DO SUL

Práticas para obter modificabilidade

Regra geral: escreva códigos fáceis de entender

Custo para modificar =

Custo para Entender + Custo para
Implementar

INSTITUTO FEDERAL
RIO GRANDE DO SUL

Custo para modificar =

Custo para Entender + Custo para
Implementar

INSTITUTO FEDERAL
RIO GRANDE DO SUL

Dê bons nomes

- Evite nomes com só uma letra, com exceção se é um padrão conhecido
- Dê nomes que revelem o propósito

Para métodos

- Evite muitos parâmetros, caso necessário use um objeto parâmetro
- Projete para que nulos não sejam passados nos argumentos, aproveite a sobrecarga
- Evite parâmetros booleanos, strings ou numéricos para identificar opções

```
// em vez de:  
int m = 10;  
// prefira:  
int minutesToWait = 10;
```

```
// em vez de:  
convert(String str, int case)  
// prefira:  
convert(String str, LetterCase case)
```

Beautiful is better than ugly.
Explicit is better than implicit.
Simple is better than complex.
Complex is better than complicated.
Flat is better than nested.
Sparse is better than dense.
Readability counts.
Special cases aren't special enough to break the rules.
Although practicality beats purity.
Errors should never pass silently.
Unless explicitly silenced.
In the face of ambiguity, refuse the temptation to guess.
There should be one-- and preferably only one --obvious way to do it.
Although that way may not be obvious at first unless you're Dutch.
Now is better than never.
Although never is often better than *right* now.
If the implementation is hard to explain, it's a bad idea.
If the implementation is easy to explain, it may be a good idea.
Namespaces are one honking great idea -- let's do more of those!

Zen of Python

Beautiful is better than ugly.

Explicit is better than implicit.
